S2 Supplementary Data

Complete matched EEG--MEG feature concordance and difference tables

Article type: Supplement

Short title: S2 Data - MEEG concordance

S2.0 Complete global coordinate contrast table

[The global MNPS export is MEG-primary shadow mapping and is not tested as a modality contrast. The full MEG-primary summary is `results/eeg_meg_ds003645_20260723/02_modality_tables/global_meg_primary_mnps_summary.csv`.]

S2.1 Complete paired feature contrast table

[The complete participant-level matched mean tests, including Wilcoxon and 5,000-permutation p values, d_z, and separate global/regional FDR q values, are written to `results/eeg_meg_ds003645_20260723/03_concordance/paired_feature_difference_tests.csv`.]

S2.2 Complete temporal-concordance table

[Run-level and Fisher-aggregated participant-level Pearson and Spearman correlations are written to `run_level_feature_correlations.csv` and `subject_level_feature_concordance.csv` in the same result directory.]

S2.3 Regional MNPS audit

[The raw regional MNPS summary and the paired audit table are written under `02_modality_tables/`. The EEG entries are retained for audit transparency but must not be interpreted as six independent regional trajectories.]
